Having Mentors is supposed to be an important part of your career development ï so why do many of us not have them? And what about sponsors which are supposed to have even more impact? Which would you rather have and be? Join and explore the research and our experiences with mentorship and sponsorship in Science, Engineering, Trades and Technology (SETT).

iGen Education is conducting a Youth Education Series which will highlight various professionals, particularly those who perused a STEM education, to hear about their career journey and the path they took to a career in STEM. One of our goals is to get more young girls and non-binary kids involved in our programs and interested in STEM careers, and we believe it would be a wonderful opportunity for them to hear from women who are in the STEM fields.

As part of this series, we invite women and non-binary folks in STE(A)M to:
ÅParticipate in a webinar (panel style) with other women and non-binary folks in STEM - date/time TBD
And/or
ÅParticipate in a 1-on-1 recorded interview (without an audience) - we will create a video combining these interviews to share on our YouTube

Please contact Emily if you are interested participating or would like more information: emily.haugen@igen-edu.com
