society, requires parallelism between science and ethics. Many decades ago, Albert Einstein wrote: "It has become appallingly clear that our technology has surpassed our humanity." Therefore, it follows that, while we strive to succeed in our careers and create new knowledge, we must also acquire and espouse human values. Centuries before Einstein, the French renaissance philosopher and physician, François Rabelais said: "Science without conscience is the soul's perdition."

You will undoubtedly have projects and brilliant ideas, which when presented to your superiors, even colleagues, more frequently than not will face a negative response; you may be told that it is difficult or impossible, whatever... Don't despair, don't give up; never take "no" for an answer, a "no" that does not have the necessary rational and sc
