Sponsor(s):

Supervisor(s): Majid Bahrami, PhD, PEng, Associate Professor, Mechatronic Systems Engineering
Mohammad Ali Fayazbakhsh, Ph.D. Candidate, Sustainability Engineering

Project Description

Vehicle energy management systems have become a popular research topic with the emergence of electric vehicles, hybrid electric vehicles, and increasingly tight emission regulations around the globe. The second most energy consuming feature in vehicles is the Heating, Ventilating, and Air Conditioning (HVAC) system. Light duty vehicles in the U.S. alone
