

In the above 2 year category, Stull and co-workers' method is again more accurate and precise in the Forensic Data Bank and Belleville samples. Cardoso and co-workers' method is again more accurate in the Raymond Dart sample, but now also in the Belleville sample.

Ancestry-specific results can be further elucidated by separately considering the "white" and "black" individuals in the Forensic Data Bank and Hamann-Todd samples (Table 2 and Figure 2).

Although Stull and co-workers' method is more accurate in the "black" sub-sample of
