

division times of \sim 22 minutes, and at 25 °C *E. coli* has a division time of \sim 50 minutes (Methods). Presenting the data in terms of division times rather than hours collapses the TSDs of *E. coli* at 25 °C onto the TSDs of *E. coli* at 37 °C in Fig. 4.

In the stochastic growth models considered in Fig. 2, noise in abundance trajectories is generated either by
