

**STATISTICS 302-3  
ANALYSIS OF EXPERIMENTAL AND OBSERVATIONAL DATA**

**Spring 2003  
DAY COURSE  
STATISTICS WORKSHOP**

---

**Instructor: DR. BRAD MCNENEY (SSC K 10556)  
Lab Instructor: R. INLSEY (SSC K 10522)**

---

**Prerequisites:**

STAT 101 (or MATH 101) or STAT 102 (or MATH 102) or STAT 203 (formerly STAT 103) or STAT 270 (or MATH 272) or STAT 301 or ARCH 376 or BUEC 232(formerly 332). Students with credit for MATH 302 may not take STAT 302 for further credit. [Mathematics major and honors students may not use this course to satisfy the required number of semester hours of upper division Mathematics. However, they may include the course to satisfy the total number of required hours of upper division credit.]

**Textbook:**

*Applied Regression Analysis and Other Multivariate Methods* (3rd ed) by Kleinbaum, Kupper and Muller, publisher Nelson.

**Calendar Description:**

The standard techniques of multiple regression analysis, analysis of variance, and analysis of covariance, and their role in experimental research.

**Outline:**

This is a practical course in the use of major statistical packages for multiple regression, analysis of variance, analysis of covariance and related methods.

**TOPICS**

**1. Introduction to Regression Analysis**

Simple regression, regression and causality, assumptions of linear regression, measuring adequacy of assumptions, estimation of error variance, inferences concerning slope and intercept, inferences concerning the simple regression line, interpretation of estimated regression lines, prediction with regression lines.

**2. Correlation and its Relationship to Regression**

Definition of the correlation coefficient,  $r$ , measures of association, and the bivariate normal distribution, what  $r$  does not measure, estimation and testing with  $r$ .

**3. Analysis of Variance**

One- and two-way analysis of variance, the analysis of

## 5. **The General Linear Model**

Multiple Regression and analysis of variance as special cases of the general linear model. The general procedure for constructing F-tests by fitting restricted models. Applications to analysis of covariance and comparison of two regression model.

6.
