Interstitial: Science Innovations by Canadian Women is an exhibition run by Curiosity Collider and funded by WWEST with events in June 2018, showcasing 2D work by female artists featuring women in Science, Technology, Engineering, and Mathematics (STEM, or STEAM when Arts is included). The event intends to challenge the public as to how they think of women in STEM. What does it take for a woman to be “in” with the science community?

This exhibition and associated events are created by women, feature women, and highlight the achievements of women in STEM. The event hopes to encourage girls and young women to see themselves as eligible for the opportunities available in STEAM industries, to connect with them beyond what is written in the books or taught in school. The purpose is to present women as capable participants within the STEAM community. It is important that as women, we tell our own stories, support, and celebrate each other.
