Hanako-TOP banana-shika eat-NEG-PAST.

'Hanako ate only bananas.'

b. [_{CP} Hanako-wa [_{TP} banana-shika [_{iFOC}][_{CASE}] [_{NEG}P Op [_{VP}... ...] NEG] T_[uFOC]] C_[uFOC]]^{inheritance}
The argument XP can establish an Agree relation with the focus probe on T because it has a case feature; however, an adjunct XP cannot establish such an Agree relation because it does not have any case. Therefore, the movement of the argument XP into Spec, TP is obligatory, while there is no need for the adjunct XP to move into Spec, TP. The ungrammaticality of multiple occurrence is due to locality of [uFOC]: a higher element with [iFOC] prevents Agree between the lower one and T. Their analysis predicts that the argument XP cannot be a fragment because it moves to Spec, TP and TP-deletion alw.24 12 o4T3 1 Tf [(f) 6.9 (or)0 0 467.8 (e) 9.2 (s) -26.6 (on) 10.9 (a) 9.2 (l) d.9 (n)] TJ ET Q q (hi) -32.6 (m)
