WHERE PASSION MEETS KNOWLEDGE

Is Cognitive Science for you?

Cognitive Science is the study of the mind and its processes, including consciousness, language, learning, information processing, and decision making. At SFU, this study is explored at the intersection of linguistics, psychology, computing science, and philosophy. Through a variety of scientific and philosophical approaches, this interdisciplinary approach seeks a broader and deeper understanding of cognition.

You will learn to:

- Communicate clearly
- Critically evaluate evidence and data
- Program and use computers
