List of Figures

1.1 A chart $(\chi, \mathbf{U})$ and projection mappings. 2
1.2 Two charts in $\mathbf{M}$ and a coordinate transformation. 3
1.3 The polar coordinate chart. 4

2.10 Three massive particles falling freely in space under Earth's gravity. . 140
2.11 Space and time trajectories of two geodesic particles freely falling towards the Earth. 141
2.12 Qualitative representation of a swarm of particles moving under the influence of a gravitational field. 142
2.13 Fig. a) shows the parallel transport along a non-geodesic curve. Fig. b) depicts the F-W transport along the same curve. 149
2.14 Measurement of a spacelike separation along the image Γ. 151
2.15 A material world tube in the domain $\mathbf{D}_{(b)}$. 166
2.16 Analytic extension of solutions from the original domain $\mathbf{D}_{(e)}$ into $\tilde{\tilde{\mathbf{D}}}$. 170
2.17 Five two-dimensional surfaces with some peculiarities. 170
2.18 Fig. a) shows a material world tube. Fig. b) shows the continuous $\dot{\bar{\mathbf{U}}}$ field over Σ 188
2.19 A doubly-sliced world tube of an isolated, extended material body. . . 191
2.20 Domain $\mathbf{D} := \mathbf{D}_{(0)} \times (0, \mathbf{t}_1) \subset \mathbb{R}^4$ for the initial value problem. 208

3.1 Two-dimensional submanifold $\mathbf{M}_2$ of the Schwarzschild space-time. . . 241
3.2 Rosette motion of a planet and the perihelion shift. 247
3.3 The deflection of light around the Sun. 249
3.4 Two $\mathbf{t}$-coordinate lines endowed with ideal clocks. 250
3.5 Qualitative representation of a spherical body inside a concentric shell. 259
3.6 A convex domain $\mathbf{D}$ in a two-dimensional coordinate plane. 270

4.1 The two-dimensional and the corresponding axially symmetric three-dimensional domain. 290
4.2 Two axially symmetric bodies in "Euclidean coordinate spaces". . . . 293
4.3 A massive, charged particle at $\mathbf{x}_{(1)}$ and a point $\mathbf{x}$ in the extended body. 320

5.1 Qualitative picture depicting two mappings from the Lemaître chart. . 367
5.2 The graph of the semi-cubical parabola $(\hat{\mathbf{r}})^3 = (\hat{\mathbf{v}})^2$. 368
5.3 The mapping $\mathbf{X}$ and its restrictions $\mathbf{X}_{|..}$. 374
5.4 The graph of the Lambert $\mathbf{W}$-function. 375
5.5 Four domains covered by the doubly-null, $\mathbf{u} - \mathbf{v}$ coordinate chart. . . 377
5.6 The maximal extension of the Schwarzschild chart. 378
5.7 Intersection of two surfaces of revolution in the maximally extended Schwarzschild universe. 382
5.8 Eddington-Finkelstein coordinates $(\hat{\mathbf{u}}, \hat{\mathbf{v}})$ describing a black hole. . . . 383
5.9 Qualitative graph of $\mathbf{M}(\mathbf{r})$. 385
5.10 Collapse of a dust ball into a black hole in a Tolman-Bondi-Lemaître chart. 387
5.11 Collapse of a dust ball into a black hole in Kruskal-Szekeres coordinates. 388
5.12 Qualitative representation of a collapsing spherically symmetric star in three instants. 389
5.13 Boundary of the collapsing surface and the (absolute) event horizon. . 390
5.14 Various profile curves representing horizons in the submanifold $\phi = \pi/2$, $\mathbf{t}$ = const in the Kerr space-time. 402

5.15 Locations of horizons, ergosphere, ring singularity etc. in the Kerr-submanifold $\mathbf{x}^4$ = const 404
5.16 The region of validity for the metric in (5.100iii) and (5.99). 410
5.17 The region of validity for the metric in (5.101). 411
5.18 The submanifold $\mathbf{M}_2^*$ and its two coordinate charts. 412
5.19 The maximally extended Kerr submanifold $\widetilde{\mathbf{M}}_2^*$. 413
5.20 Qualitative representation of $n \quad o \qquad o$ in the $\mathbf{T}$-domain and the Kruskal-Szekeres chart. 423
5.21 Collapse into an exotic black hole depicted by four coordinate charts. 430
5.22 Qualitative graphs of $\mathbf{y} = [\boldsymbol{\theta}(\mathbf{s})]^{-1}$ and the straight line $\mathbf{y} = \boldsymbol{\Omega}(\mathbf{s}) := \mathbf{y}_0 + (1/3) \cdot (\mathbf{s} - \mathbf{s}_0)$. 433

6.1 Qualitative graphs for the "radius of the universe" as a function of time in three Friedmann (or standard) models. 440
6.2 Qualitative representation of a submanifold

A6.3 A cross section of a wormhole profile curve and corresponding surface of revolution. 657
A6.4 A “top-hat” function. 660
A6.5 The expansion of spatial volume elements in a warp-drive space-time. 661
A6.6 The distribution of energy density for a warp-drive space-time. . . . 662
A6.7 Two examples of closed timelike curves. 663
A6.8 The embedding of anti-de Sitter space-time in a five dimensional flat space-time with two dimensions suppressed. 664
A6.9 The light-cone structure about an axis = 0 in the Gödel space-time. 665
